

# Legal Compliance, Privacy and Security

---

**Travis D. Breaux**

Assistant Professor of Computer Science  
Institute for Software Research  
Carnegie Mellon University

*Presented at CMU Privacy Series, November 19, 2010*

# What's to come...

- Problem and Motivation
- Background and Related Work
- Legal Requirements Acquisition
- Empirical Validation
  - Case Studies
  - Experiments
- Contributions and Future Work

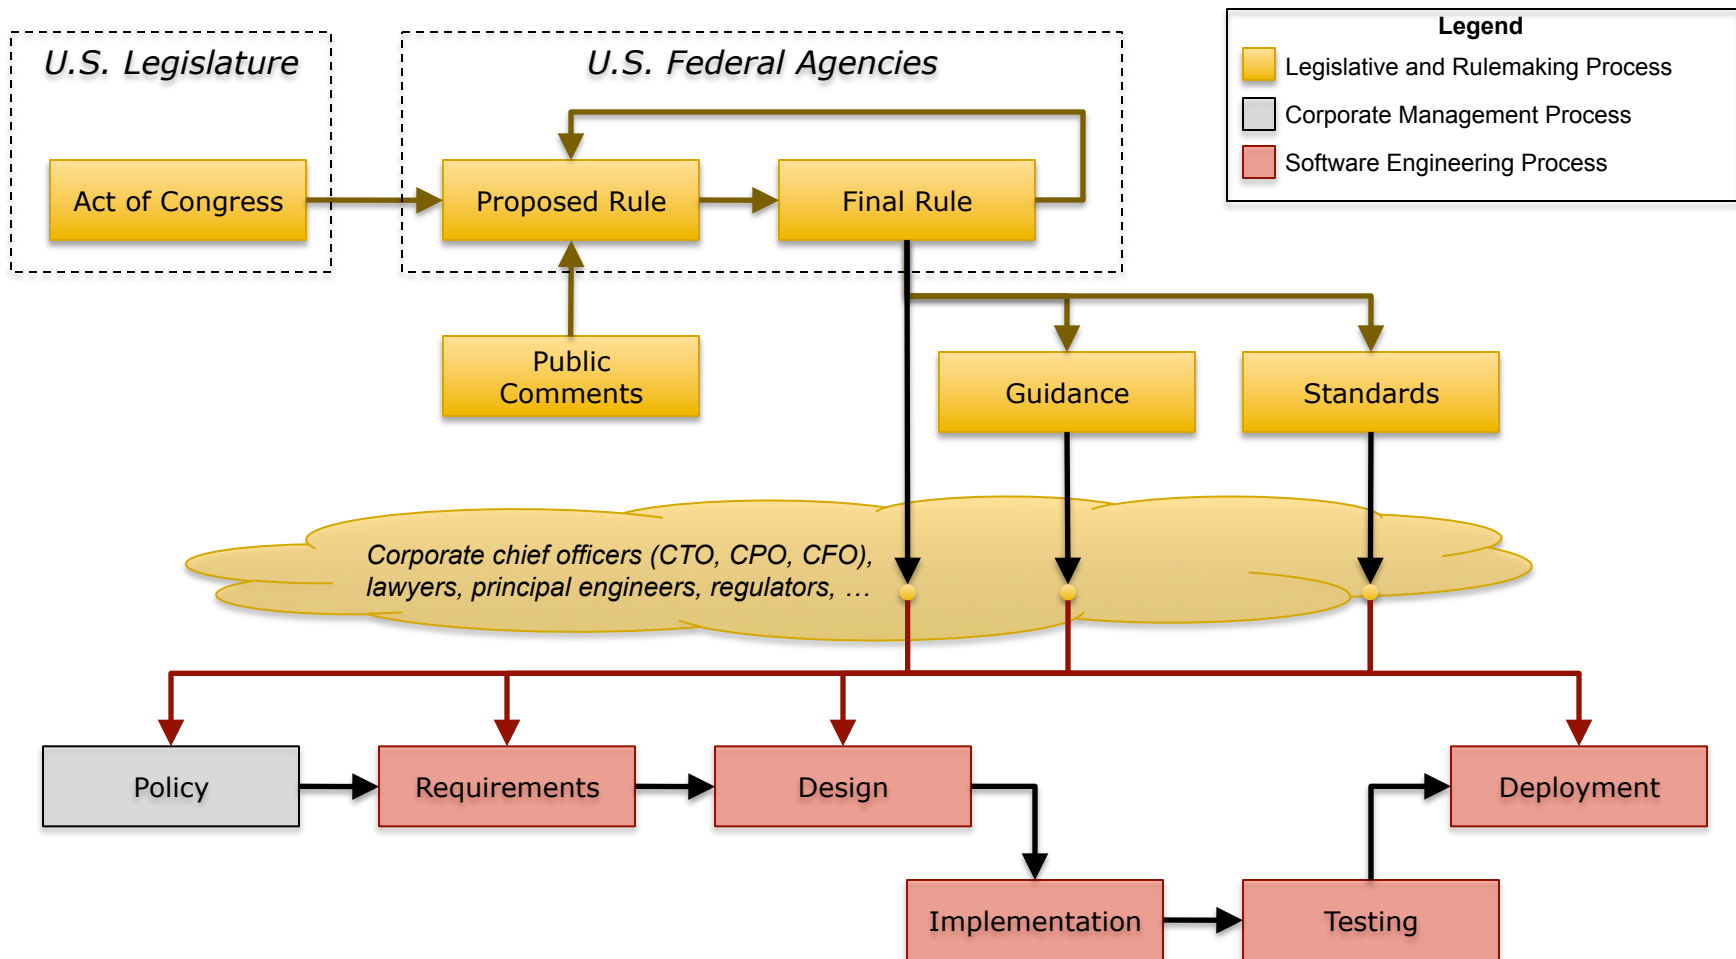

# Compliance Problem

Organizations must ensure their information systems comply with privacy and security law.

Software engineers and system administrators must:

- ❑ Identify relevant legal requirements from policies, laws and regulations; and
- ❑ Align these requirements with system specifications

# What do we mean by the law?

# Why should computer scientists study the law?

The costs of non-compliance can be severe

- **Civil fines and consumer redress:**
  - ChoicePoint fined \$15M for FCRA violations
  - CVS fined \$2.25M for HIPAA violations
- **Public harms:** Over 14M consumers affected unfair and deceptive trade practices in 1999-08 [*Breaux and Baumer, 2009*]
- **Reengineering:** ChoicePoint spends \$3M to update business and system processes [*Otto and Antón, 2007*]
- **Legal fees and Consumer Churn**

# Legal Terminology

**Due Diligence** refers to reasonable efforts to satisfy legal requirements or discharge legal obligations

**Good Faith** includes observance of reasonable commercial standards of fair dealing in a given trade or business, or absence of intent to defraud or to seek unconscionable advantage

**Standard of Care** includes giving attention both to possible dangers, mistakes and pitfalls and to ways of minimizing those risks

*[Black's Law Dictionary, 8<sup>th</sup> Ed.]*

# **Legal Requirements Acquisition**

---

# Identifying Legal Requirements

*rights, obligations and constraints*

- (1) **The covered entity** who has a direct treatment relationship with the individual **must**...
  - (A) **Provide notice** no later than the first service delivery;
- (2) For the purposes of paragraph (1), **a covered entity** who delivers services electronically **must provide electronic notice unless**...

Key:

Obligations are **red**

Constraints are underlined

Modal/ condition keywords are **bold**

*Excerpt from HIPAA §160.520(c)*

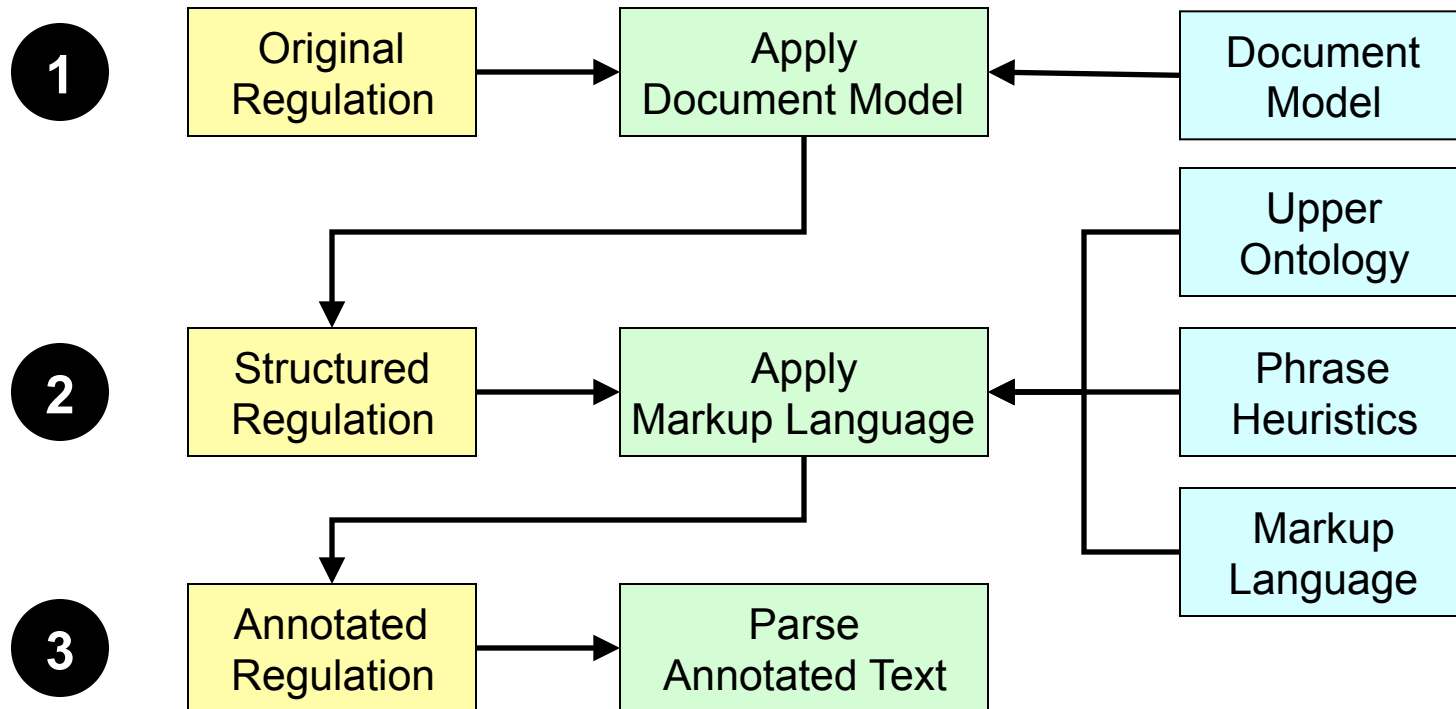

# Extracting Legal Requirements

*rights, obligations and constraints*

- (1)  $[O_1]$  The covered entity  $[C_1]$  who has a direct treatment relationship with the individual **must...**
    - (A) **Provide notice**  $[C_2]$  no later than the first service delivery;
  - (2) For the purposes of paragraph (1),  $[O_2]$  a covered entity  $[C_3]$  who delivers services electronically **must provide electronic notice unless...**  $[C_4]$
- From paragraph (1) we extracted  $O_1: [C_1 \wedge C_2]$
  - Now we carry down  $C_1, C_2$  from paragraph (1) to yield  $O_2: [C_1 \wedge C_2 \wedge C_3 \wedge \neg C_4]$

*Excerpt from HIPAA §160.520(c)*

# The Acquisition Method

# Regulatory Document Model

## XML Markup

```
<document>
  <!-- 164.520 (a) (2) (i) (B) -->
  <div index="(ii)">
    A group health..., must:
    <div index="(A)">
      Maintain a notice under this section; and
    </div>
    <div index="(B)">
      Provide such notice to any person...
    </div>
    ...
  </div><!-- end of (ii) -->
</document>
```

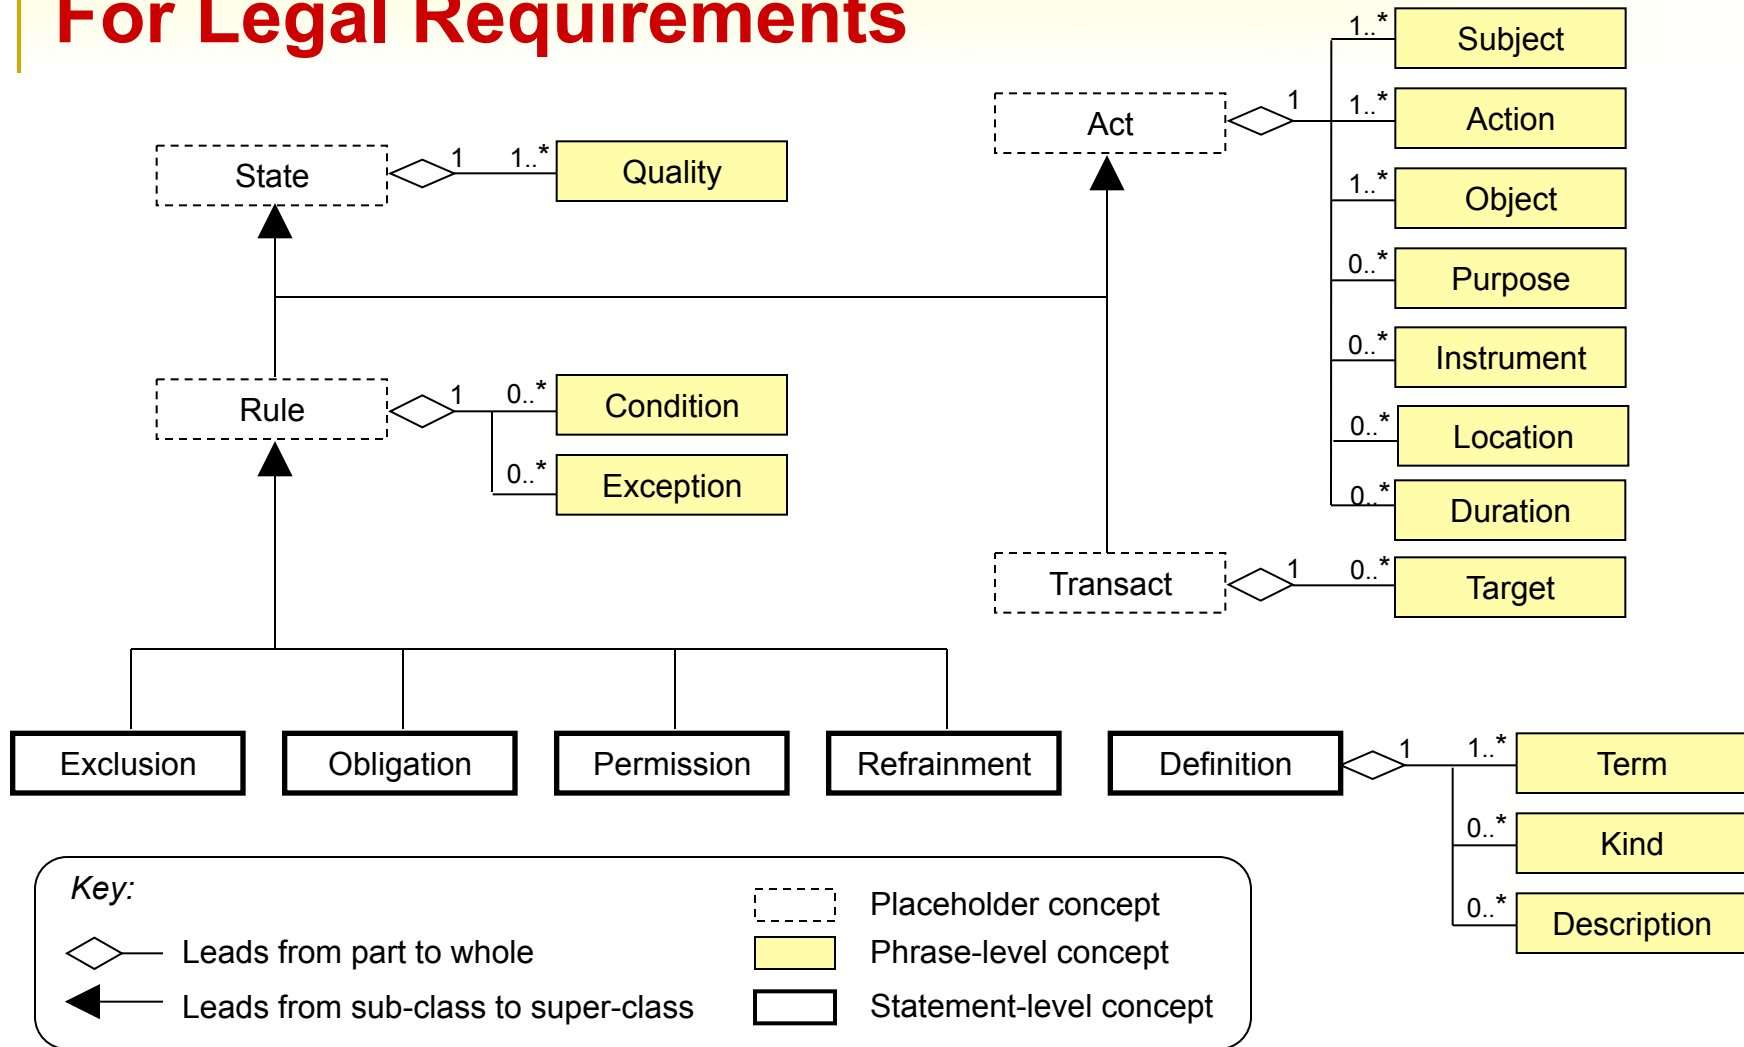

# Types of Legal Statements

Statements about actions that a stakeholder or product is...

- Permitted to perform (**Permission**)
- Required to perform (**Obligation**)
- Prohibited from performing (**Refrainment**)
- Not expressly permitted or required to perform (**Exclusion**)  
(also called No-rights and Privileges by Hohfeld)

**Definition** is a statement that restricts the meaning of a term by one or more constraints

# Standard Upper Ontology For Legal Requirements

# Phrase Heuristics

[IEEE RE 2006]

From HIPAA Privacy Rule §164.520-164.526:

Phrase Pattern	Concept
<i>if</i>	Condition
<i>when</i>	Condition
<i>except when</i>	Exception
<i>is not required to</i>	Exclusion
<i>must</i>	Obligation
<i>must deny*</i>	Obligation
<i>must permit*</i>	Obligation

Phrase Pattern	Concept
<i>must request*</i>	Obligation
<i>has a right to</i>	Permission
<i>may</i>	Permission
<i>may deny*</i>	Permission
<i>may require*</i>	Permission
<i>may not</i>	Refrainment
<i>may not require*</i>	Refrainment

\* these patterns denote delegations from one actor to another

# Types of Legal Ambiguity

- **Logical ambiguity**, words with different logical meanings
- **Attributive ambiguity**, phrases can be ascribed to multiple, other phrases
- **Referential ambiguity**, multiple extensional and intensional meanings, called polysemy
- **Omissions and under-specifications**

*The notice must include "the name or title and telephone number of a person or office"*

1. Name of a person or office?
2. Name and telephone number of a person or office?
3. Title and telephone number of a person or office?

*Excerpt from HIPAA §160.520(b)(1)(vii)*

# Variance in Traditional Practice

*89 Total Requirements Acquired*

- Constraint integration and case splitting (17 of 89)
- Omissions and under-specifications (72 of 89)
- Changes in modality (50 of 89):
  - Balancing rights and obligations (32 of 89)  
e.g., must provide → may receive
  - Exclusions become refrainments (8 of 89)  
e.g., does not have a right to → shall not have a right to
  - Obligations changed to implied permissions (5 of 89)  
e.g., must → shall be able to

# Classification Exercise Results

*Over 94 responses per requirement type*

- People more often (78% vs. 67%) correctly classify permissions that describe stakeholder rights
- Most people (68%) correctly classify obligations
  - 30% mislabel “shall allow” as a permission
- Most people (47%) correctly classify refrainments
  - 23% mislabel refrainments as exclusions
  - 23% mislabel “shall not” as an obligation
- Most people (55%) correctly classify exclusions
  - 31% mislabel exclusions as refrainments

# **Case Study Findings**

---

# Iterative Refinement of Theory

## Formative Studies

- **Goals:** Most frequent 100 goals from over 100 Internet privacy policies [*POLICY'05, RE'05*]
- **Facts:** HIPAA Patient Fact Sheet from HHS [*WPES'05*]

## Summative Case Studies

- **Practices:** HIPAA Privacy Rule (4 sections) [*RE'06, TOSEM'08*]
- **Privacy:** HIPAA Privacy Rule (entire rule) [*TSE'08*]
- **Accessibility:** Access Standards [*RE'08*]

*Conducted using case study designs [Yin, 2003; Creswell, 2002]*

# Balancing Rights and Obligations

## *Practices Case Study #3*

*[IEEE RE 2006]*

- **Delegation** - The covered entity (CE) may require the individual to request an amendment in writing
  - **(implied obligation)** The individual must request an amendment in writing
  
- **Purposes and Conditions** - The CE must post the notice for the individual to read
  - **(implied right)** The individual has a right to read the notice
  
- **Transaction** - The individual may receive notice from the CE
  - **(implied obligation)** The CE must provide notice to the individual

# Beliefs and Determinations

## *Privacy Case Study #4*

*[IEEE TSE, January 2008]*

Identified 300 data access requirements and 1894 constraints, including:

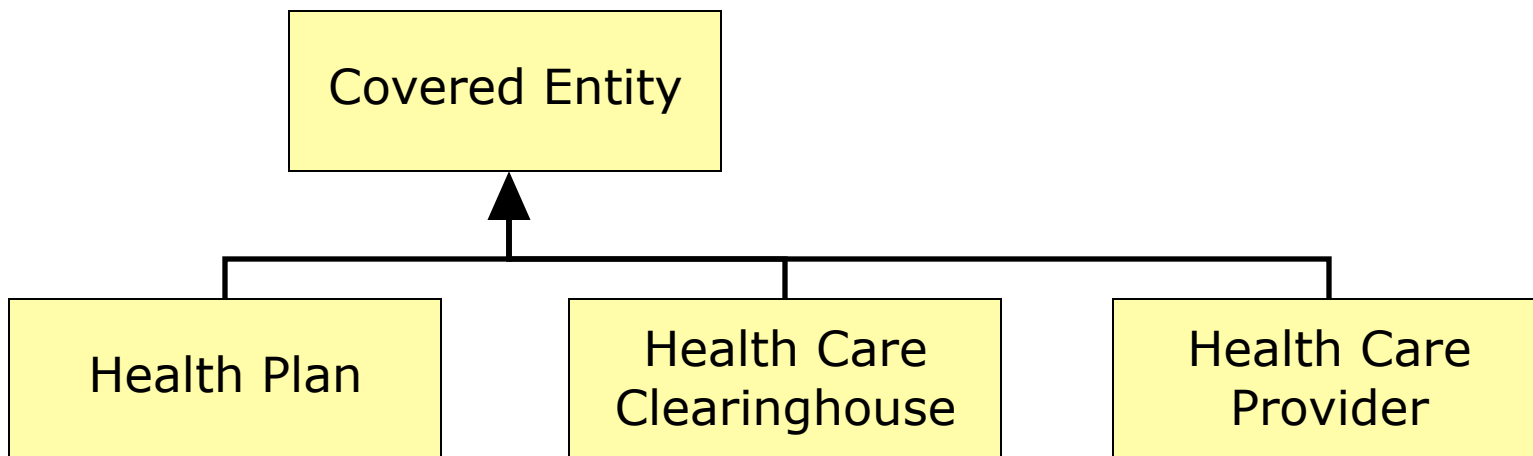

- **Legal**: Who is authorized by law to receive reports of child abuse or neglect
- **Medical**: Who determines the individual is incapacitated
- **Personal**: Who determines the consent of the individual is inferred from the circumstances
- **Contractual**: Who obtains an alteration or waiver of an individual's required authorization

# Stakeholder Hierarchy

## Practices Case Study #3

[IEEE RE 2006 / IEEE TSE, January 2008]

**HIPAA §160.103:** Covered entity means: a health plan, a health care clearinghouse and a health care provider who transmits any health information in electronic form in connection with a transaction covered by this subchapter.

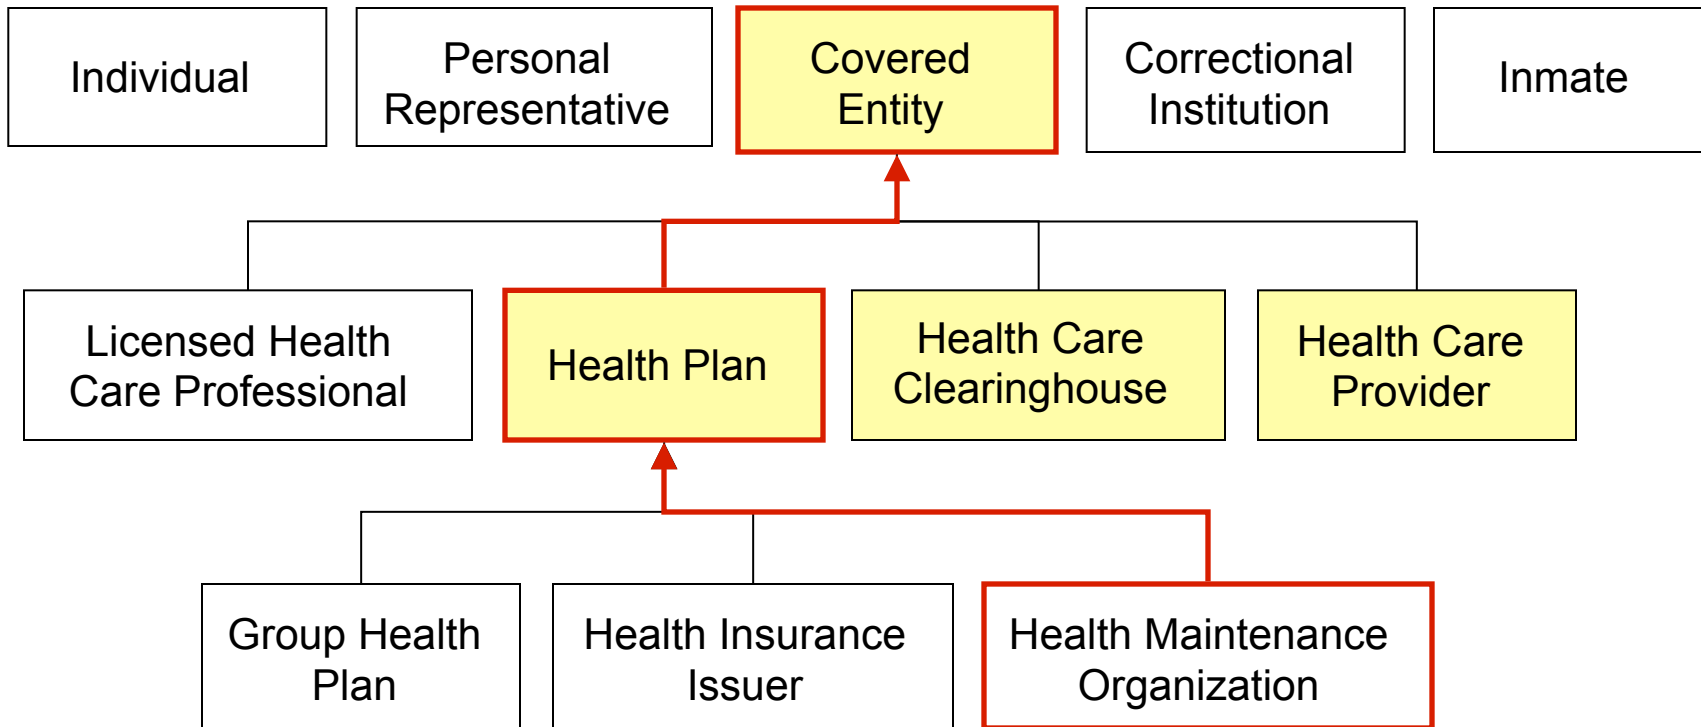

Key: ← Leads from sub-class to super-class

# Stakeholder Hierarchy

## Practices Case Study #3

[IEEE RE 2006 / IEEE TSE, January 2008]

*Stakeholders must satisfy all of the obligations in their role hierarchy*

# Formalization in Logic

**Obligation:** The covered entity (CE) **must** provide notice to the individual.

<b>Activity</b>	<b>Subject</b>	<b>Action</b>	<b>Object</b>	<b>Target</b>
Transaction	CE	provide	notice	individual

## Z Notation:

$\exists v:Activity; s:CE; a:Provide; o:Notice; t:Individual \bullet$   
 $subject(v, s) \wedge action(v, a) \wedge object(v, o) \wedge target(v, t)$

## Description Logic:

$Activity \sqcap hasSubject.CE \sqcap hasAction.Provide \sqcap$   
 $hasObject.Notice \sqcap hasTarget.Individual$

# Obligations with Subtle Differences

## Practices Case Study #3

[ACM TOSEM, October 2008]

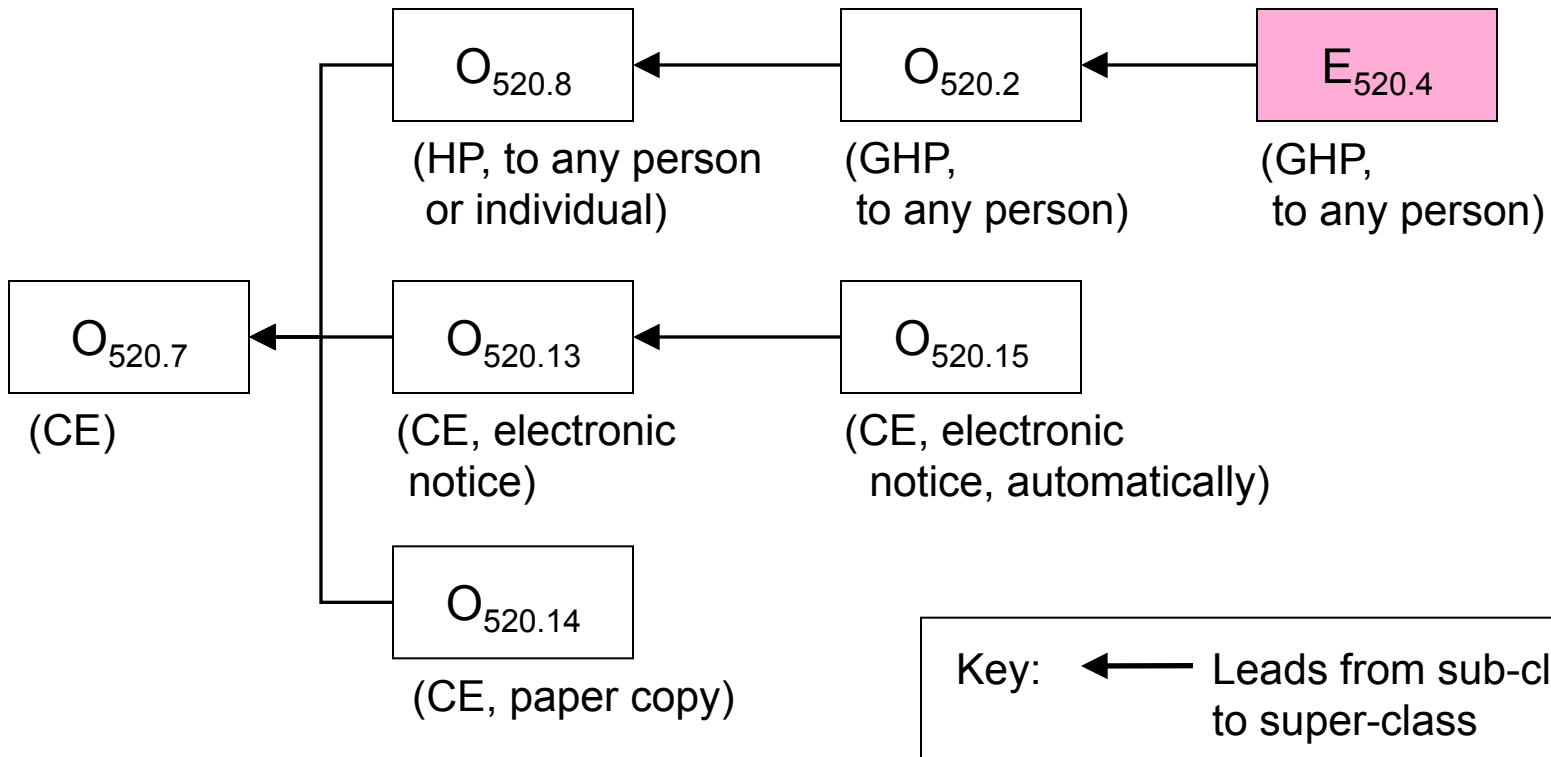

ID	Obligation Description
O <sub>520.2</sub>	The GHP must provide notice to every person
E <sub>520.4</sub>	The GHP is not required to provide notice to any person
O <sub>520.7</sub>	The CE must provide notice to any person or individual
O <sub>520-8</sub>	The HP must provide notice to any person or individual
O <sub>520.10</sub>	The HCP must provide notice to the individual
O <sub>520.13</sub>	The CE must provide <b>electronic notice</b> to the individual
O <sub>520.14</sub>	The CE must provide <b>a paper copy of the notice</b> to the individual
O <sub>520.15</sub>	The CE must automatically provide electronic notice to the individual

# Requirement Specialization

## Practices Case Study #3

[ACM TOSEM, October 2008]

*Obligations to provide different types of notice to different actors*

# Visualizing Finite State Machines

[RELAW 2010]

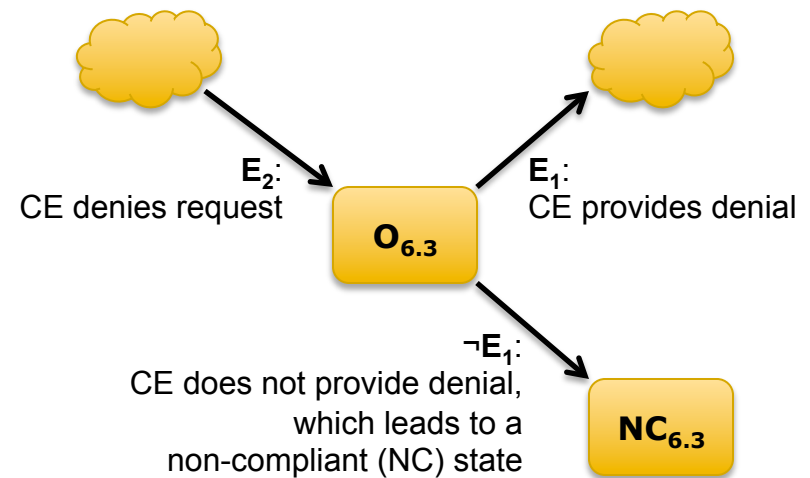

**State-Event Table**

Index	Subject	Action	Object
O <sub>6.3</sub>	Rule	require	E <sub>1</sub>
E <sub>1</sub>	CE	provide	E <sub>2</sub>
E <sub>2</sub>	CE	deny	E <sub>3</sub>
E <sub>3</sub>	Individual	request	E <sub>4</sub>
E <sub>4</sub>	CE	amend	PHI

**Transition Table**

Set	Source	Event	Target
1		E <sub>2</sub>	O <sub>6.3</sub>
2	O <sub>6.3</sub>	E <sub>1</sub>	
3	O <sub>6.3</sub>	¬E <sub>1</sub>	NC <sub>6.3</sub>

**Visualized Finite State Machine**

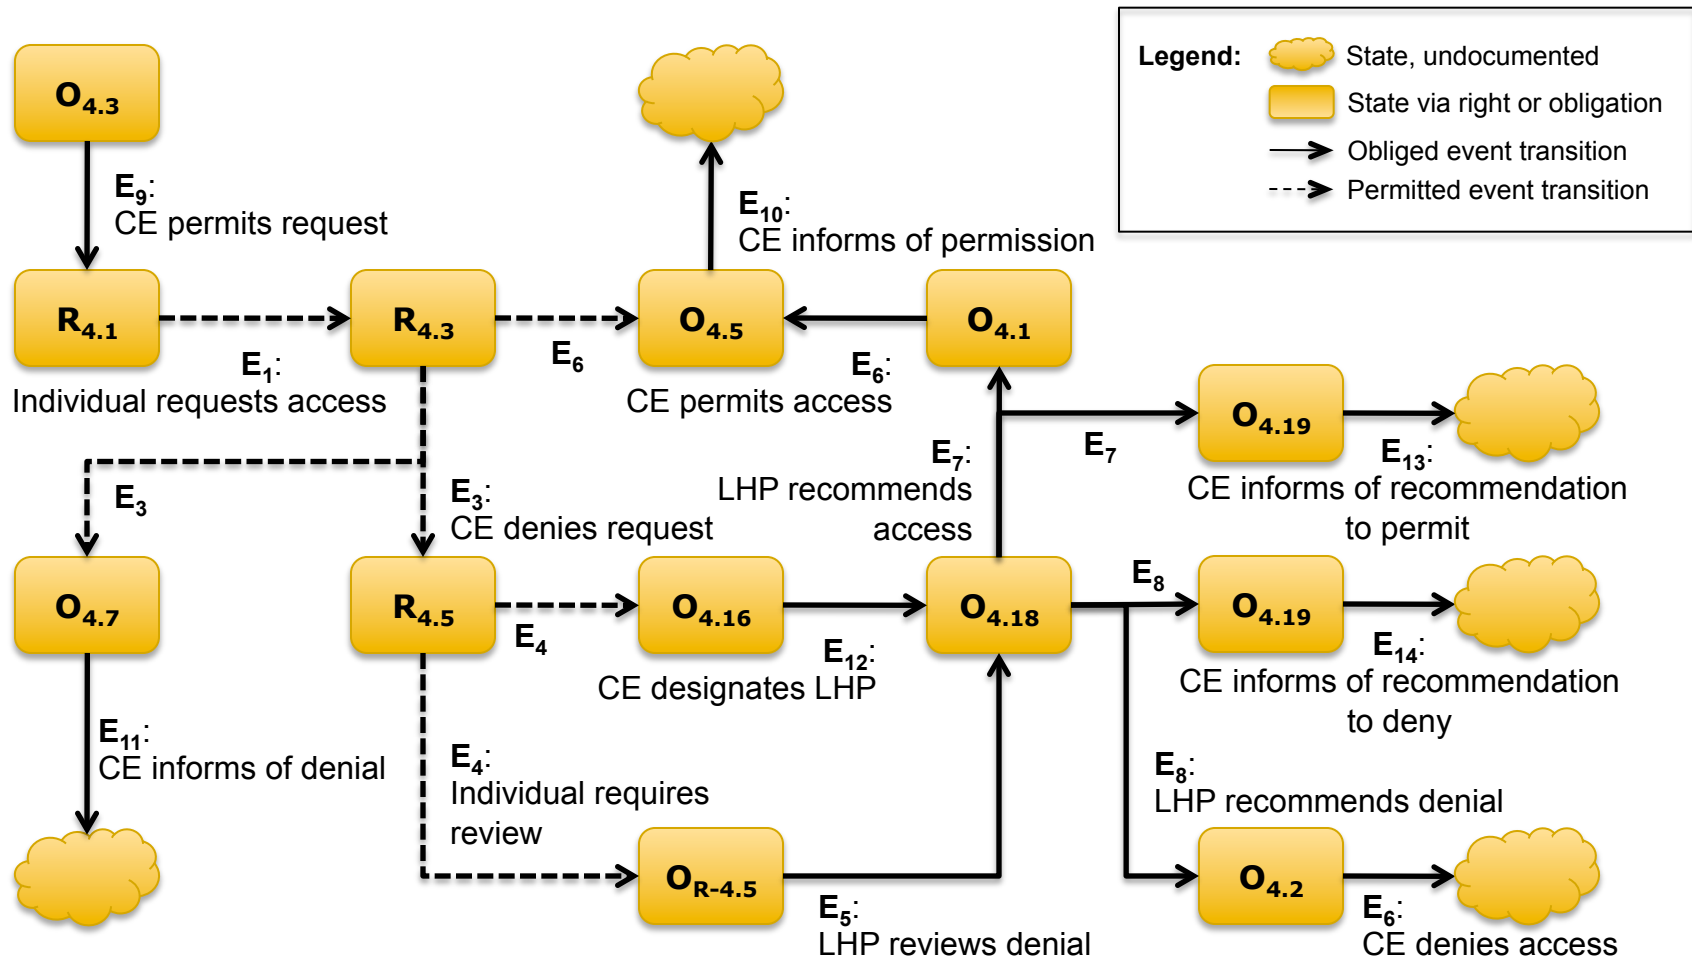

**Legend:**

- State, undocumented
- State via right or obligation
- Transition via an event

# Combined Compliance Monitor

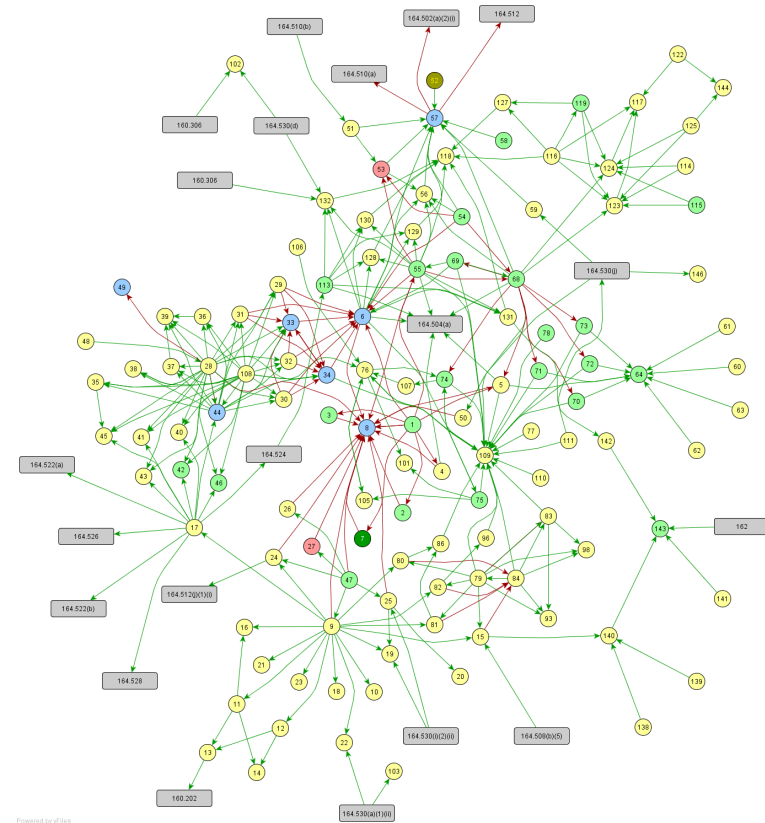

Acquired from HIPAA Privacy Rule §164.524

# Interpreting Cross-references

## Practices Case Study #3

- Identified 1720 mappings among legal requirements
- Cross-references types:
  - ❑ As defined in... (58%)
  - ❑ Except for... (36%)
  - ❑ As follows... (8%)
- 63% of requirements in referenced paragraphs were false-positive
- 52% of referenced requirements contain cross-references

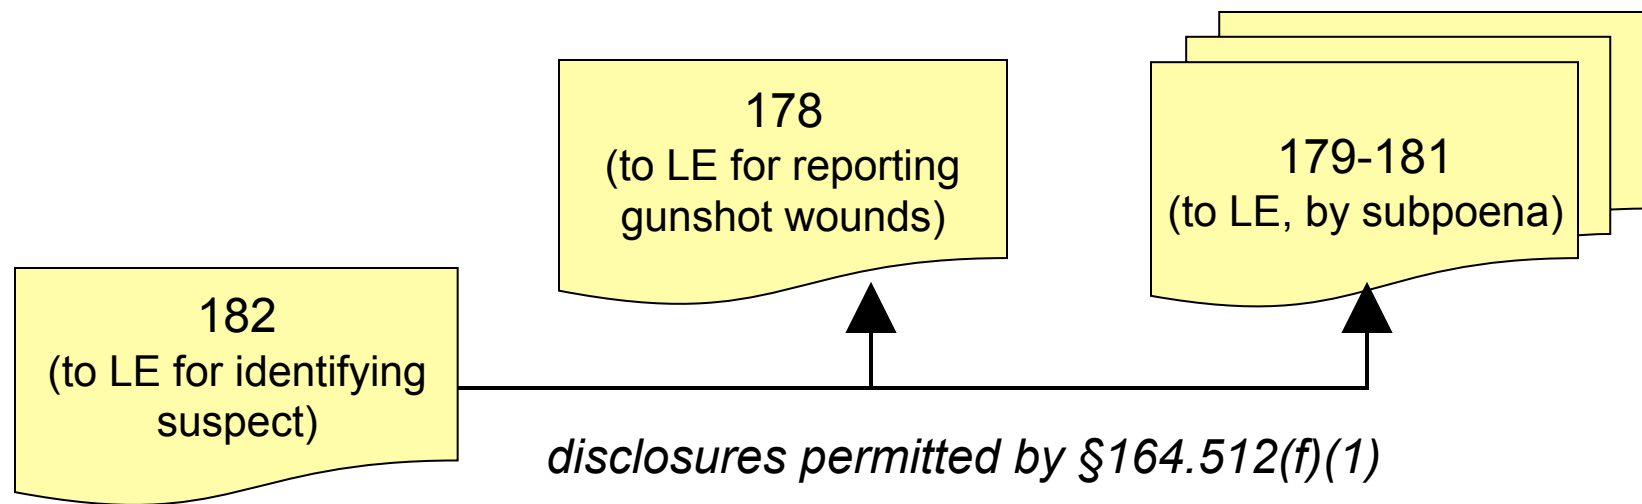

Cross-reference graph acquired from  
HIPAA §164.520-526

# Handling Legal Exceptions

## Privacy Case Study #4

[IEEE TSE, January 2008]

**HIPAA §164.512(f)(2):** Except for disclosures required by law as permitted by paragraph 164.512(f)(1), a CE may disclose PHI in response to a law enforcement (LE) official's request for the purpose of identifying or locating a suspect

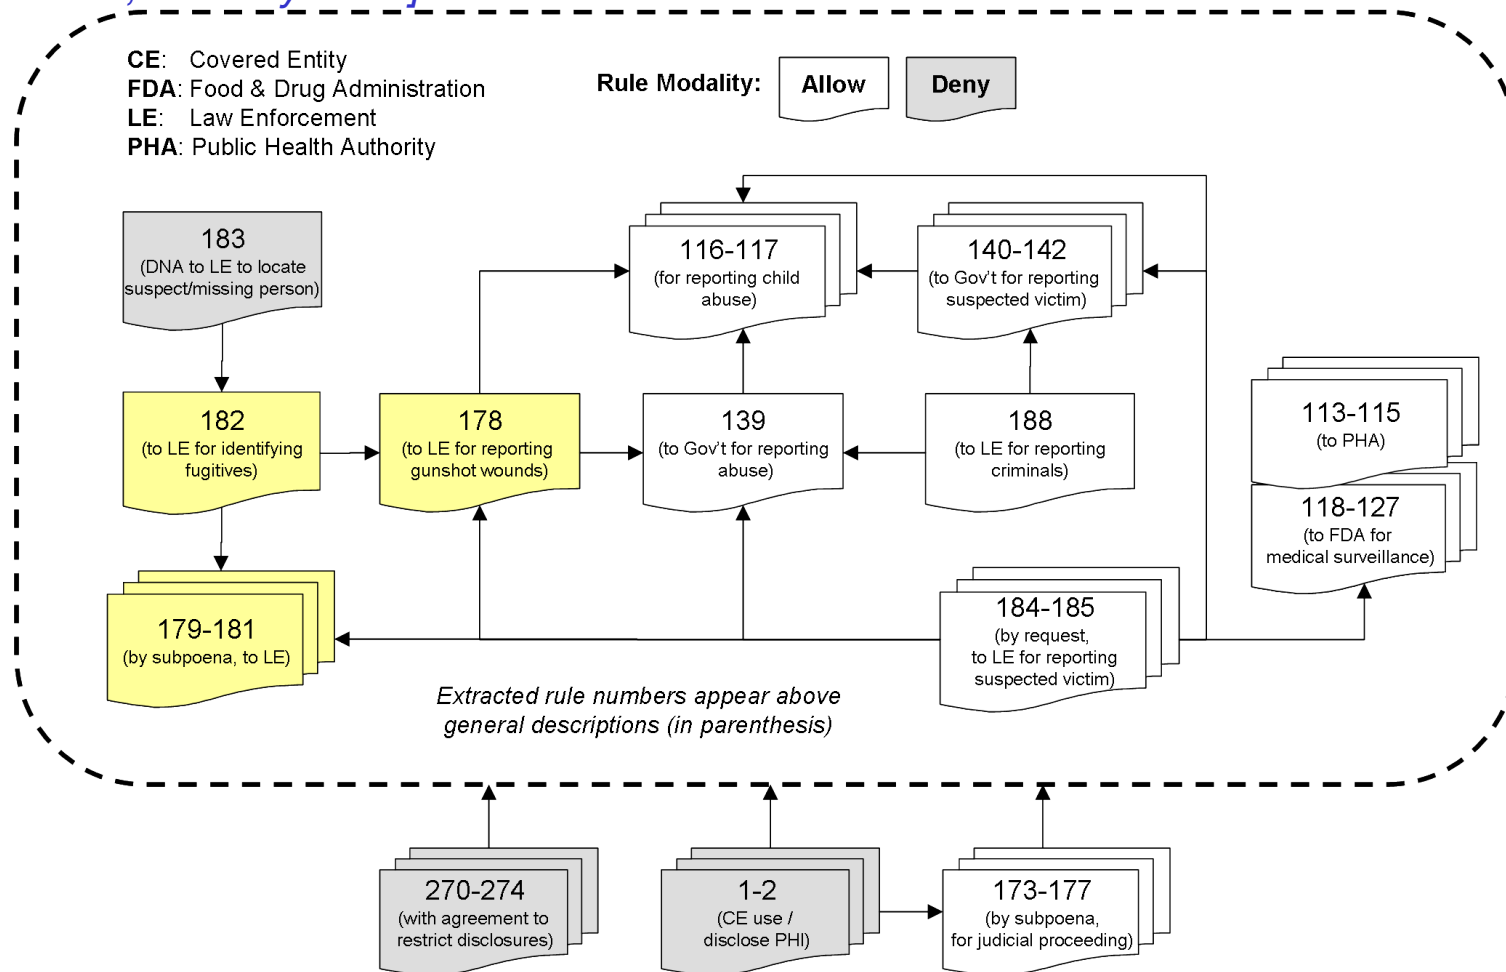

Key: ← Leads from lower to higher priority

# Requirements Exception Hierarchy

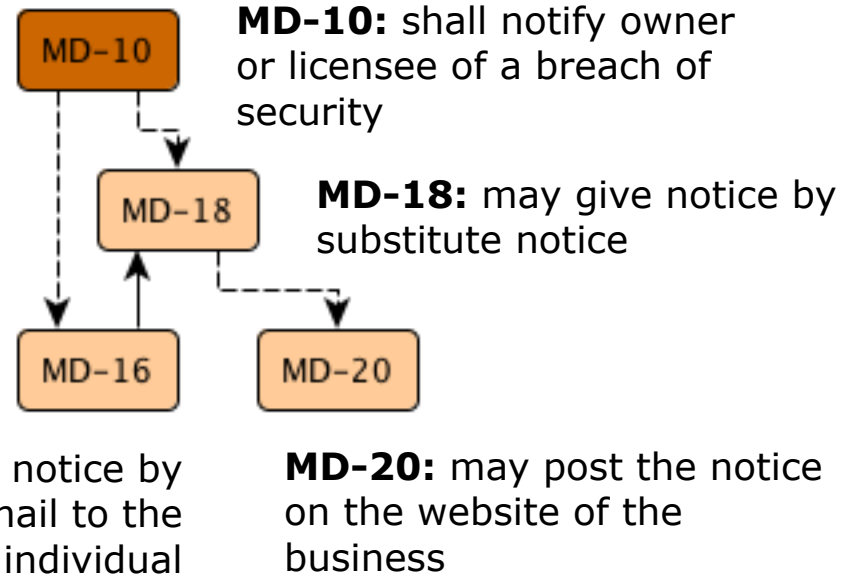

## Privacy Case Study #4

[IEEE TSE, January 2008]

# Conditional Surface Structure

- **Surface** consists of the “first-contact” conditions for an organization
- **Extension** consists of rules that refine or follow other rules

**Legend:**  Surface  Extension —> Exception - - -> Refines or Follows

# **Contributions and Future Work**

---

# Contributions

- A **systematic method** for acquiring and formalizing requirements from regulations with traceability
- A **reusable requirements model** (standard upper ontology) validated in two domains
- Four new **requirements prioritization methods**:
  - Balancing rights with obligations
  - Stakeholder and product hierarchy
  - Requirements specialization
  - Requirements exception hierarchy
- A **suite of tools** that partially automate the method

---

# Future Work Challenges

## Requirements Analysis

- Transnational data privacy laws
- Collaborative legal requirements refinement

## Requirements and System Specification

- Electronic rulemaking
- Trustworthy and compliant design

---

**Thank you!**

**Feedback and Questions**
